SymSoil® Inc. Releases Revolutionary Grow Cubes

SANTA ROSA, CA – December 12, 2019 – The much anticipated Amazing Results Grow Cubes are being released for sale this week by SymSoil, Inc. The complete living Soil Food Web is in every single 1.5 inches of peat cube.

The highly unique Grow Cubes may superficially look similar to other products. However, unlike anything currently on the market, each SymSoil Grow Cube hosts thousands of living beneficial microbes. These exclusive properties have never before been available as Grow Cubes to cultivators and gardeners as a primary growing medium for rooting cuttings, clone plants, and germination start seeds.

Infused with SymSoil's proprietary, patent-pending formula, the Amazing Results Grow Cubes deliver healthier plants that bloom larger, faster and with strong pathogen resistant immune systems.

SymSoil Amazing Results Grow Cubes are inoculated with several thousand species of beneficial soil microbes, including protozoa and nematodes, a wide variety of fungal species, and approximately 5,000 beneficial fungi spores that enhance nutrient availability.

Not found in any other packaged medium, SymSoil Grow Cubes contain a number of Endomycorrhizal fungi species which serve as the coupling link to create vital root systems. SymSoil's formula increases nitrogen and phosphorous availability also improving rooting times and vertical growth. For cannabis, it causes an increased breakdown of polyphenols dramatically enhancing terpene production and flavor profile.

SymSoil CEO Elizabeth Pearce says, "We are passionate about bringing this amazing product, in this packaging to market. Cultivators will be thrilled with the results, and we are excited for them."

SymSoil formula increases plant stem width that supports branch strength, bud set and lateral growth.

Special release introductory pricing is available for a short time. Normally, priced at \$2.50 per cube, for a limited time, consumers can get 6 cubes for \$10.00. Visit www.symsoil.com/promo for information.
